

Amendment to the Claims:

This listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Previously presented) A paint color card comprising a substrate having a first surface that has a surface area that is coated in its entirety with a layer of a first colored coating composition formulated to have a dried color that is substantially similar to dried color of a commercially-available paint composition, said paint color card having formed therein a plurality of perforations defining a detachable chip section.

2. (Original) The paint color card of claim 1, wherein detachment of the chip section from the paint color card forms a window in the paint color card.

3. (Original) The paint color card of claim 1, wherein the chip section is generally square.

4. (Original) The paint color card of claim 1, wherein the substrate is composed of paper.

5. (Original) The paint color card of claim 1, wherein indicia is printed on the paint color card, said indicia designating a formula for the commercially-available paint composition.

6. (Previously presented) The paint color card of claim 5, wherein the indicia comprises a name and an identifying code corresponding to the formula for the commercially-available paint composition.

7. (Currently amended) The paint color card of claim 5, wherein the indicia is printed ~~over~~ on a second surface of the paint color card.

8. (Original) The paint color card of claim 1, wherein the paint color card has a second surface coated with a layer of the first colored coating composition.

9. (Previously presented) The paint color card of claim 1, wherein the paint color card has a second surface coated with a layer of a second colored coating composition formulated to have a dried color that is substantially similar to dried color of a second commercially-available paint composition, said second colored coating composition having a different color than the first colored coating composition.

10. (Previously presented) A paint color card comprising a substrate having a first surface that has a surface area that is coated in its entirety with a layer of a first colored coating composition formulated to have a dried color that is substantially similar to dried color of a commercially-available paint composition, said paint color card having formed therein a plurality of perforations arranged in at least one tear line, said at least one tear line at least partially defining a chip section, wherein when the at least one tear line is severed, the chip section is movable to form a window in the paint color card.

11. (Original) The paint color card of claim 10, wherein the at least one tear line has ends separated by a space in which the paint color card is not perforated, wherein when the at least one tear line is severed, the chip section may be folded over along a fold line to form the window, said fold line extending between the ends of the at least one tear line in the space.

12. (Original) The paint color card of claim 10, wherein the at least one tear line comprises a plurality of tear lines that define the chip section, and wherein when the tear lines are severed, the chip section may be detached from the paint color card.

13. (Original) The paint color card of claim 10, wherein the chip section is generally square.

14. (Original) The paint color card of claim 10, wherein the substrate is composed of paper.

15. (Original) The paint color card of claim 10, wherein indicia is printed on the paint color card, said indicia designating a formula for the commercially-available paint composition.

16-24. (Canceled)

25. (Previously presented) The paint color card of claim 10, wherein the paint color card has a second surface coated with a layer of the first colored coating composition.

26. (Previously presented) The paint color card of claim 10, wherein the paint color card has a second surface, having a surface area that is coated in its entirety with a layer of a second colored coating composition formulated to have a dried color that is substantially similar to dried color of a second commercially-available paint composition, said second colored coating composition having a different color than the first colored coating composition.
